Operation Assessed	Kinesis Lab - General Lab Safety

Associated with specific area

-  Basement 2
-  B2 029 (Robotics Lab)
-  All

Description of work area and/or activity assessed

This risk assessment covers the Kinesis's laboratory environment, focusing on research and experimental activities. The lab contains various equipment such as ground robots, aerial drones, computers, power tools, batteries, and other specialized research instruments such as sensors of different kind. Activities include equipment operation, routine maintenance, battery handling, and power tool usage. Risks may arise from electrical systems, improper use or storage of equipment, hazardous disposal practices, and lack of personal protective equipment (PPE) in designated areas. The environment must be kept clean and orderly to ensure safety, particularly around high-risk activities like electrical work or operation of dangerous equipment.

Reason for Risk Assessment

To ensure the safety and well-being of lab personnel by identifying potential hazards, implementing preventive measures, and maintaining compliance with safety regulations. This assessment aims to address risks associated with equipment use, and emergency scenarios to foster a safe and efficient working environment.

Overall Current Risk

Moderate Risk

Average Number of Persons Affected

5	 Employees
2	 Machine Operators
2	 Students
3	 Visitors

Current Rating	Hazard Information	Task Status
Low Risk	Electricity Electrical systems and equipment, including power tools and high-voltage power sources, may present risks of electrical shock, short circuits, or oeverheating if not properly inspected or maintained. Improper use of extension cords and overloaded power strips can increase these risks.	0 0 0
	Measures Currently in place to prevent risk of injury	
	Regular inspections of electrical systems, cords, and outlets to detect wear or damage. Implementation of proper grounding techniques and surge protection measures. Training personnel on electrical safety, including safe use of power strips and isolation procedures.	

Potential Rating	Additional Controls Required
Low Risk	No Remedial Actions Entered If there are any reasonably practicable actions which can be taken to reduce the risk associated with this hazard please use the form above to enter them.

Current Rating	Hazard Information	Task Status
Low Risk	Ergonomics Prolonged use of computers or other lab equipment may lead to musculoskeletal issues such as back pain, neck strain, or repetitive strain injuries (RSI). Improper workstation setups, including non-adjustable chairs or poorly positioned monitors, can exacerbate these risks.	0 0 0
	Measures Currently in place to prevent risk of injury	
	Adjustable chairs and desks provided to ensure proper posture during work. Regular reminders for personnel to take breaks and stretch during prolonged tasks. Training on proper workstation setup and posture maintenance.	

Potential Rating	Additional Controls Required
Low Risk	No Remedial Actions Entered If there are any reasonably practicable actions which can be taken to reduce the risk associated with this hazard please use the form above to enter them.

Current Rating	Hazard Information	Task Status
Low Risk 	Fire The lab contains potential fire hazards such as electrical equipment, batteries, and power tools. Improper handling, storage, or maintenance of these items can result in sparks or overheating, increasing the risk of fire. Cluttered spaces or blocked emergency exits may exacerbate the situation during an incident.	0 0 0
	Measures Currently in place to prevent risk of injury	
	Regular inspections of electrical systems and equipment for damage or wear. Fire extinguishers and smoke detectors installed and regularly maintained. Emergency procedures in place, including evacuation plans and training sessions for lab personnel.	

Potential Rating	Additional Controls Required
Low Risk 	No Remedial Actions Entered If there are any reasonably practicable actions which can be taken to reduce the risk associated with this hazard please use the form above to enter them.

Current Rating	Hazard Information	Task Status
Moderate Risk 	Fall of Object from Height Certain areas of the lab, such as the drone-flying arena, present the risk of falling objects (particularly drones) that may malfunction or be improperly handled. A falling drone poses a risk of head or upper body injury to anyone standing or walking beneath it.	0 0 0
	Measures Currently in place to prevent risk of injury	
	Restricted access to the drone arena during fligght operations Flight operations only conducted by trained personnel Pre-flight checks required for all drones to ensure structural and operational integrity Clear signage and floor marking to delineate flight areas and no-entry zones during operation	

Potential Rating	Additional Controls Required
Moderate Risk 	No Remedial Actions Entered If there are any reasonably practicable actions which can be taken to reduce the risk associated with this hazard please use the form above to enter them.

Current Rating	Hazard Information	Task Status
Low Risk 	Slip / Trip / Fall The lab environment includes potential tripping hazards such as cables, tools, and other equipment left on the floor. Spiplled liquids, cluttered workspaces, or uneven flooring may also lead to slips or falls, posing a risk of injury to personnel during daily activities or emergencies.	0 0 0
	Measures Currently in place to prevent risk of injury	
	Routine cleaning and organization of the workspace to ensure pathways are clear Proper cable management using cable trays or covers Immediate cleanup of any spills Regular inspections to identify and address uneven surfaces or loose flooring	

Potential Rating	Additional Controls Required
Low Risk 	No Remedial Actions Entered If there are any reasonably practicable actions which can be taken to reduce the risk associated with this hazard please use the form above to enter them.
